Product Guide

TEROS™
ICO Turnkey Platform

Intelliblock

TEROS™ is a product developed by Intelliblock Co. Ltd. Intelliblock is the premier blockchain solutions provider for the European market. Situated in Malta, Intelliblock makes full use of the state-of-the-art infrastructure and the national willingness for blockchain adoption to present its portfolio of products.

TEROS™

TEROS is a regulation-ready turnkey ICO platform which will revolutionise the industry by reducing the turn around of any ICO from around 12-18 weeks just down to a few days. This means that TEROS is more than 50% cheaper than any other available solution on the market. Each ICO runs its own instance of TEROS™ on the extremely stable and scalable cloud infrastructure. This makes it both very secure and able to handle the high-traffic demand.

Smart Contracts

TEROS™ is completely automated and run entirely by a set of more than 20 externally audited and publicly scrutinised smart contracts. Following the initial setup by Intelliblock, TEROS™ runs automatically without human intervention. Fund collection, token distribution, max cap limit watch, bounty, affiliates, KYC, AML, document verification, refunds on PEP and high-risk investors are all managed by TEROS's Smart Contract Engine.

AML & KYC Ready

TEROS™ is AML & KYC ready. Intelliblock is based in Malta, one of the most proactive countries which made its position towards cryptocurrency and blockchain business publicly positive from the outset and has never reversed its view. Intelliblock is regulation-ready, as part of the user account and deposit process TEROS™ handles KYC, AML and real-time document verification. This will ensure that any ICO run on the TEROS™ platform is safe, secure, reliable and professional. It also shows a strong commitment by the client towards the technology and future proofing the funds raised.

ERC20

TEROS™ is built for ERC20 compliant token generations. The Ethereum token standard (ERC20) is used for Ethereum smart contracts. ERC20 defines a common list of rules that an Ethereum token has to implement. ERC20 compliant tokens also allow clients to list in multiple exchanges , smarter and faster.

API Library

TEROS™ is flexible. At Intelliblock we know that a unified web presence and branding is key to a successful token generation event (TGE) / ICO. Hence TEROS™ is already equipped with a full featured API library for full and seamless integration into your brand and web presence. Some of the API library features are: Countdown timers, fund counters and limits, timelines and releases to just mention a few.

Private Pre-sale Agreements

We are aware that as part of any strong ICO most companies opt for SAFT (Private pre-sale) agreements. Now you don't need to manage a different structure or infrastructure. TEROS handles SAFT inherently in its setup hence then taking care of SAFT disbursements with the smart contract library.

Fully Configurable Bonuses and ICO Goals

TEROS™ is designed as a turnkey solution and it is built with ultimate flexibility. TEROS™ ICO Platform lets the customer set unlimited configurable bonuses and ICO goals as well as token discount releases. These can be both based on dates and time and/or funds raised.

Accepted Cryptocurrencies

At the moment of launch, TEROS™ will accept both Bitcoin and Ethereum as fund deposits. In the coming months TEROS™ will also be accepting Litecoin, NEO and FIAT currency in both USD and EUR. At intelliblock the developers have also built a custom Bitcoin

bridge. The Bitcoin Bridge is a small system that allows us to accept Bitcoin payments and issue ICO tokens on the Ethereum platform, if the ICO goal is met, the Bridge will forward all Bitcoin payments to the ICO beneficiary wallets.

TEROS™ a seal of confidence.

Any token buyer using a TEROS™ based ICO will only need to create an account once. Each ICO which runs on the TEROS™ platform will allow the user to use the same account for all the ICO's he/she wishes to take part in. This gives another important advantage to all ICO's running on the TEROS™ platform as a seal of confidence. Users are only required to go through KYC and document verification once which makes users KYC verified on all the ICOs that run on the TEROS™ platform.

TEROS™ is safe, reliable and secure. The entire system is based on the blockchain, it is up to regulation (regulation-ready) and all operations, once initiated. are handled entirely by smart contracts with no human intervention.

Legal and Terms of Sale

With our experience in ICOs we know that a major part of the work involved in ICOs is the legal framework. TEROS™ provides turnkey contracts of sale as well as fully compliant terms and conditions of sale.

TEROS™ is backed by a strong team at Intelliblock

Intelliblock was one of the first end-to-end ICO solutions company in the world, offering; legal, contractual, technical, financial and marketing consultancy. Intelliblock along with its partners offers a suite of business solutions such as company incorporations, bank account opening
